Green Products for Storage Tanks

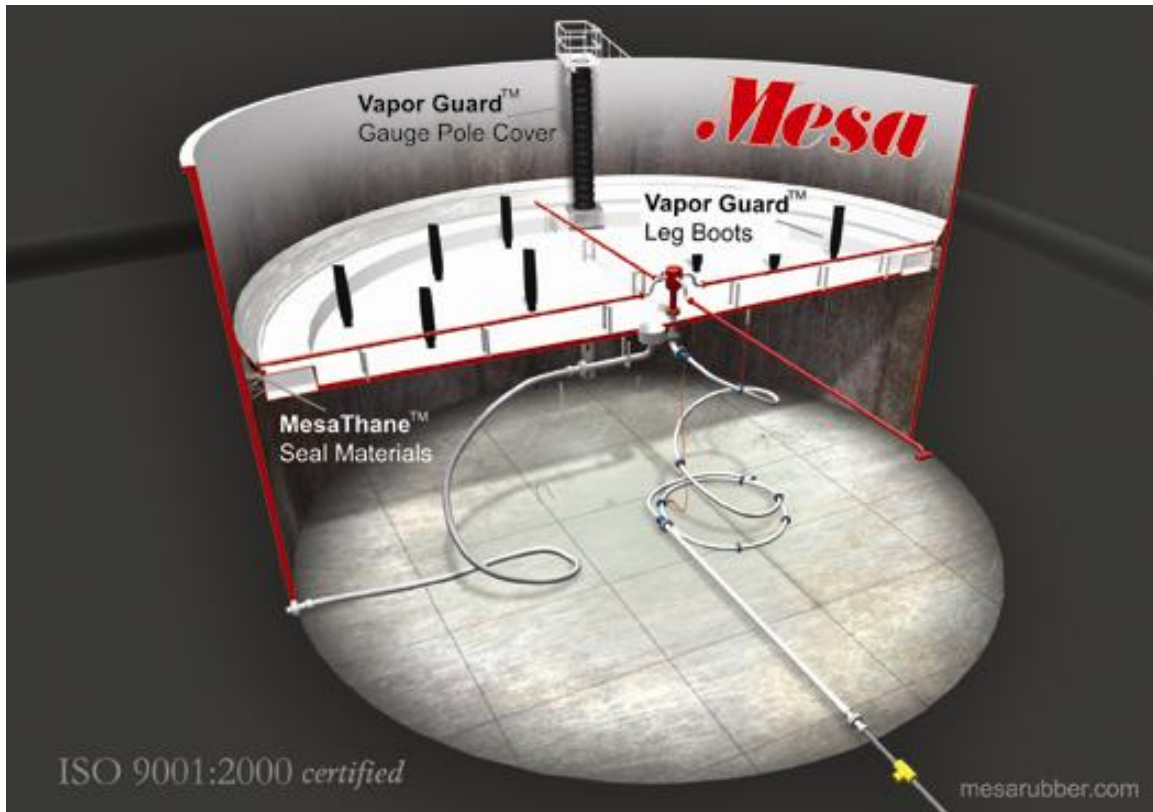

Aboveground Storage Tank (AST) owners and managers can help reduce environmental contamination by using Mesa's line of emission control products. These "green" products for ASTs include MesaThane™ floating roof seal materials, Vapor Guard™ Leg Boots (socks) and Gauge Pole Covers. MesaThane™ seal materials have been in use by customers since Mesa's formation in 1967--over 40 years of tried-and-true experience in all ranges of storage products and applications. Mesa has manufactured Vapor Guard™ Leg Boots (socks) since 1989 and they are in service with a vast array of products. Mesa introduced Vapor Guard™ Environmental Gauge Pole Covers in 2001 with wide acceptance throughout the industry. To maintain a long product service life, Mesa's engineers analyze each application for seal materials, Leg Boots and Gauge Pole Covers to determine the material and configuration that best suits each application.

MesaThane™ floating roof seal materials (Mesalon™ seal materials are an alternative for extreme chemical environments) are suitable for several "green" applications including AST primary and secondary curtain seals at the floating roof rim area, foam log/envelope seals, vapor bladders, pontoon liners, repair bladders and other custom applications.

Vapor Guard™ Leg Boots are designed to reduce emissions caused by vapors escaping from floating roof support legs. Leg Boots (also referred to as "socks" in the storage tank industry) form a covering for the support legs to seal in hydrocarbon vapors. Vapor Guard™ Gauge Pole Covers reduce hydrocarbon vapors from escaping through slots in AST Slotted Gauge Poles. Gauge Pole Covers form a casing around the exterior of the Slotted Gauge Pole. An optional Transition Box provides a seal at the deck opening.

In addition to reducing environmental contamination, tank owners benefit from Mesa's green products by reducing product loss from their tanks. Product loss is reduced by sealing in hydrocarbon vapors at specific areas on the floating roof, namely the rim space, gauge pole and support legs. By meeting environmental regulations with the use of Mesa's green products, tank owners realize additional benefits of compliance and operational efficiency.
